

Viktor Hasselström Svensson

Information Systems Analysis graduate

Ready to use my skills and passion to push your organization forward. I have a positive attitude and the will and motivation to learn new programming languages. With a passion for programming I have during my study time amassed a wide skillset related to programming. I have, in addition to the courses I have taken, immersed myself in JavaScript, Java and C++. My thesis was about information security at a smaller consulting firm. I am structured, dedicated and solution-driven, both in and out of school. Click on the link to reach my [personal website](#)
